Human Perspectives Units 1 & 2 and Units 3 & 4, seventh editions, have been written to address the updated WACE ATAR course for Human Biology. Each chapter features information under clear subject headings making it easy to navigate, read and assimilate. The content is highly illustrated with photographs, electron

micrograph images and annotated diagrams, which are designed to engage students and to encourage scientific thinking, investigation and problem solving. These titles are supported by a NelsonNet website and NelsonNetBook. Features contain a large number of fully worked examples demonstrate mathematical processes and encourage independent learning. Designed to help classroom teachers provide enrichment for those students who quickly grasp the mathematical concepts being taught and are ready to move on to more challenging units. The units include challenging activities that will require higher level thinking and will broaden students' problem-solving skills. This new series adopts a qualitative and quantitative model approach to the teaching of physics. Models, laws and theories are developed and used to explain and predict physical phenomena, from the very small to the very large. Students investigate their predictions using the scientific method and by interpreting second hand data (SIS strand). Go beyond the regular curriculum with these units to challenge your more able intermediate grade math students. With their ease of use, clear instruction, and motivating topics, these are the perfect enrichment activities for the regular math curriculum. This book contains four units that are structured so that students can easily develop an understanding of the topics on their own. The four topics are: permutations and combinations, tessellations, line drawings, and graphing. Each unit provides sequential activities that allow students to work through these motivating topics, whether they are working by themselves, in a small group, or in a whole-class setting. The units lend themselves easily to a math center arrangement with each student having an individual folder and checklist to record his or her progress. While they were designed to provide added challenge for students who have mastered the regular curriculum, some of the units can be used as supplements for whole-class instruction. The emphasis in these units is on promoting thinking, developing perseverance, expanding students' view of mathematics, enjoying a challenge, and keeping math students actively involved and enthused about math. This book will help you provide students with opportunities to explore mathematical ideas in ways that promote their intellectual growth and expand their views of mathematics. This is one of a three-book series. The other books cover the following topics:

Enrichment Units in Math Book 1—attribute pattern blocks, tangrams, sets and Venn diagrams, and ancient Egyptian numbers; and Enrichment Units in Math Book 3—probability, topology, magic squares, and number characteristics. For other math units to extend the math curriculum and provide opportunities to work independently, see Math Extension Units Book 1 and Book 2. Grades 4-6 The Chemistry Book supports the development and application of key knowledge and skills for students studying senior science in both Queensland and greater Australia. A consistent approach to each text's format supports student learning and exam preparation. Go beyond the regular curriculum with these units to challenge your more able primary grade math students.
