**The Future of Nursing 2020-2030** Mar 16 2020 The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy. Accordingly, at the request of the Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care systems that are designed to work for everyone. The Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-focused care into 2030. This work builds on the foundation set out by The Future of Nursing: Leading Change, Advancing Health (2011) report.

*Impacts of Rationing and Missed Nursing Care: Challenges and Solutions* Feb 07 2022 This book reveals how economic restrictions and limited healthcare resources, combined with growing care demands due to advanced technology and more care options, have to a great extent contributed to increased workloads for healthcare professionals and put them under pressure to prioritize their work. This has led to the rationing of care, i.e., to decision-making processes on the allocation of scarce resources, especially human resources, and on which care activities take priority over others; in turn, these processes have led to unfinished or missed care, which has serious implications for quality of care and patient safety. Concerns related to nursing shortages and lean staffing practices have increased the awareness of the problem, as patient outcomes are affected by the quality and quantity of care that they receive and led to intensified scientific inquiry into this phenomenon. This book is written by the members of the Rancare Cost Action group, whose aim is to facilitate discussion about rationing of nursing care based on a cross-national comparative approach with implications for practice and professional development. Four working groups investigated four areas for four years: a) the conceptualization of care rationing and methodological inquiries concerning the investigation of the phenomenon, b) exploration of possible solutions and intervention studies, c) the ethical perspective of care rationing and missed care including patients' rights and possible discrimination, and d) the educational implications, based on an exploration of the level of patient safety training and care rationing, as well as preparing guidelines for managers. The book will be a valuable resource for nurses, allied healthcare professionals, managers, policymakers, researchers, ethical committees, and educators whose goal is to provide better and safer care.

**The Future of Nursing** May 10 2022 The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
