A CDC-6600 version of AMPX-I, the Oak Ridge National Laboratory's modular code system for generating coupled multigroup neutron--gamma libraries from ENDF/B data is described. The AMPX modules can generate multigroup neutron cross sections; generate multigroup gamma cross sections; generate gamma yields for gamma-producing neutron interactions; combine neutron cross sections, gamma cross sections, and gamma yields into 'couple sets;' perform one-dimensional discrete-ordinates-transport or diffusion-theory calculations for neutrons and gammas and, on option, collapse the cross sections to broad-group structure, with the one-dimensional results used as weighting functions; and output multigroup cross sections in convenient formats for other codes. 7 figures, 4 tables. Program FILXYZ prepares an input file for program FUNXYZ by merging together subfiles of data for a specified test configuration or set of test conditions based upon one, two, or three independent variables. Program FUNXYZ computes the function of one, two, or three variables of a set of empirical

or test data to provide a file with values that are equally spaced over the independent variables. The programs are written in FORTRAN for use on the CDC 6600. 2 figures. This report describes a plotting package for use with the Tektronix 4014 graphics terminals on the Picatinny Arsenal CDC 6500/6600 time sharing system. The routines are used in conjunction with the TCS (Terminal Control System) provided on the CDC System, and are similar to several standard Calcomp plotting routines. (Author). This book constitutes the refereed proceedings of the 4th International Conference on Pervasive Computing, PERVASIVE 2006, held in Dublin, Ireland, in May 2006. The 24 revised full papers presented here are organized in topical sections on activity recognition, location, sensors, sensor processing and platforms, toolkits and gaming, security, pointing, interaction and displays, and smart homes, and beyond. Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the

NASA Scientific and Technical Information Database. This report is a user manual for the program QUADRAW which draws visible-line-projection pictures of objects bounded by sections of quadric surfaces. The report describes three versions of the program, one each for the CDC 6600, Univac 1110 and IBM System/360-370 computers. It also provides the necessary documentation to permit one to modify the program for any other computer. (Author). HARVEST is an information discovery and access system [4]. It addresses three critical problems to help users reap the growing collection of information accessible via the World Wide Web [2]. First, it provides an efficient and flexible means of indexing widely distributed information, to support resource discovery. Second, it provides network-adaptive means of caching and replicating heavily accessed information, to prevent bottlenecks. Third, it provides support for accessing and manipulating complex data. A key goal of Harvest is to provide a flexible system that can be configured in various ways to create many types of indexes, making very

efficient use of Internet servers, network links, and index space on disk. Our measurements indicate that Harvest can reduce server load by a factor of 6,600, network traffic by a factor of 59, and index space requirements by a factor of 43 when building indexes, compared with previous systems, such as Archie, WAIS, and the World Wide Web Worm [3]. Harvest also allows users to extract structured (attribute-value pair) information from many different information formats and build indexes that allow these attributes to be referenced (e.g., all documents with a certain regular expression in the title field). The report is intended primarily as a user's manual for the optimized one-dimensional, nonrelativistic electrostatic particle code BOUNCE. This code is particularly well suited for the investigation of nonlinear, laser-induced instabilities in a one-dimensional homogeneous plasma, but is useful for other simulations as well. A brief discussion of numerical techniques is included. Complete FORTRAN and CDC 6600 compass assembly language listings

together with sample output are attached. (Author). David Busch's Sony Alpha a6600/ILCE-6600 Guide to Digital Photography is the most comprehensive reference and guide book available for Sony's flagship APS-C mirrorless camera. This enthusiast digital camera has a more powerful processor and upgraded autofocus with enhanced real-time tracking and advanced Eye AF. Built-in 5-axis image stabilization allows sharp images hand-held even with slower shutter speeds. The a6600's new LCD swivels to face forward, making the camera excellent for self-portraits, vlogging, and other applications. The a6600 features a 24 megapixel sensor with 425 embedded phase-detect pixels for lightning-fast autofocus at up to 11 frames per second, and a more powerful battery to extend shooting life. With an electronic shutter that provides a silent shooting option, stunning 4K/UHD video capabilities, and new time-lapse photography features, the a6600/ILCE-6600 is a versatile digital camera that's simple to use, yet boasts features demanded by the most avid photo buff.
