Includes no. 53a: British wartime books for young people. This textbook on haematology in the Illustrated Colour Text series is suitable for medical students, junior doctors and others needing a concise and practical introduction to the subject. Concise and manageable coverage of the major blood diseases and their treatment. Does not overload the reader with science, unlike some competing books. Focus is on the haematology patient and on the practical aspects of the subject. Makes use of the attractive features of the ICT series - double page spreads,

lots of colour illustrations, summary boxes. Updating to take account of recent developments in stem cell biology. Increased emphasis on genomic and proteomic techniques in the diagnosis of haematological malignancy. Use of new imaging techniques including MRI and PET. Description of advances in treatment of leukaemia and lymphoma and in diagnosis and management of patients with thrombophilia and venous thrombosis. Development of new antimicrobial agents in management of immunosuppressed patients with infection. New double page spread on palliative care of patients with blood disorders. New illustrations. This highly revised and updated atlas is the third edition of an essential reference in the field of hematology. Highly illustrated, this colorful visual diagnostic aid condenses the pathogenesis, clinical, morphological, and investigative aspects of the whole range of blood disorders into one, comprehensive resource. The detailed reproduction of photomicrographs, along with concise, clinically-directed text facilitates the recognition of morphological abnormalities in blood and bone marrow cells. The highly accessible format of this text enables quick and easy reference for anyone using it. Comprehensive coverage the whole range of blood disorders is discussed Highly Illustrated in full colour aids recognition of signs in the cells Concise text with explanatory artworks enables quick and easy reference in the laboratory Explanatory artworks and tables clarifies complex principles, helpful for trainees Brings together pathogenesis, clinical, morphological, investigational and therapeutic aspects Additional coverage of: Newly discovered cytokines (interleukins 9 to 14) Molecular defects in inherited and acquired blood disorders New leukaemia types and the new classifications of the lymphom Blood has long been an object of intrigue for many of the world's philosophers and physicians, and references to it have existed since the earliest studies of human anatomy. Herodotus of Halicarnassus, whose writings 500 years before the birth of Christ drew on stories collected during his widespread travels, was amongst the first to identify the ritualistic and medical significance of blood. However, despite this long established history, haematology as a medical specialty is relatively new. A History of Haematology: From Herodotus to HIV traces the history of haematology from biblical times to the present, discussing the major defining discoveries in the specialty, ranging from war as a catalyst for the development of new techniques in blood transfusion, to the medical response to the HIV/AIDS epidemic. In this beautifully illustrated and passionately rendered history of the field of haematology, Professor Shaun McCann traces the remarkable developments within haematology and the work of the scientists and pioneers central to these advances. This engaging and authoritative history will appeal to a wide audience including haematologists, nurses and other health care workers in haematology, as well as medical students, and general physicians with an interest in haematology. Research Paper (undergraduate) from the year 2010 in the subject Medicine - Public Health, , language: English, abstract: In most countries, there are likely to be some laboratories with limited resources, but in economic distressed countries, there are few laboratories with highly trained technologists and sophisticated equipment. In these countries therefore, it is not unusual for laboratory tests to be carried out by nurses and ordelies in outpatient consulting rooms, corridors and in rural health centres. Understaffing, poor morale, inadequate equipment and erratic supplies of reagents are chronic problems in laboratories in poorer countries and these factors have a major impact on the range and quality of services that can be offered. Many smaller laboratories are multifunctional, performing Haematology, Parasitology, Clinical chemistry and Bacteriology tests. A blood transfusion service is usually available at the larger institutions and unless there is a national blood service, laboratory staff will be responsible for donor selection, blood collection and issuing of blood. If there is no organisation of public health laboratories, routine laboratories will be required to provide high quality health surveillance data for epidemiological and public health monitoring. In a number of economically distressed countries, the difficulties are compounded by the fact that health services are becoming overwhelmed by expanding epidemics of HIV/AIDS (Human immunodeficiency virus/Acquired immune deficiency syndrome), tuberculosis and malária. Diagnosis and monitoring of these diseases require a healthy, robust and reliable laboratory service. Thus malária diagnosis must be confirmed by a laboratory test because other disorders can masquerade clinically as malária. The diagnosis of tuberculosis may require bone marrow aspiration and culture and trephine biopsy examination, especially in patients who are also HIV positive because in these cases sputum tests for acid fast organisms are frequently negative. Monitoring of HIV progression to AIDS and effectiveness of antiretroviral therapy requires Haemoglobin estimation, CD4-positive lymphocyte counts and plasma viral load estimation. The main purpose of this topic-(Haematology practice in distressed economy) is to point towards an effective haematology service that can be provided despite serious limitations. This text on clinical haematology is aimed at undergraduates and contains all the information on this subject required for final exams in a form that should make revision easier and more efficient. Topics covered include anaemias, hypersplenism, lymphoproliferative disorders and more. This manual describes all of the techniques used in the investigation of blood diseases. It discusses the principles of each test, possible causes of error, and the interpretation and clinical significance of the results. A Flexibook for both the specialist and non-specialist, the new book offers accessible information on hematology in a succinct format. In addition to providing basic methodology, the book utilizes more than 260 color illustrations to detail the most up-to-date clinical procedures. Numerous tables and flow charts are included to assist in differential diagnosis, making this a valuable didactic reference for nurses, practicing physicians and residents preparing for board examinations. This new edition includes an update on HIV disease/AIDS, recently developed HIV rapid tests to diagnose HIV infection and screen donor blood, and current information on antiretroviral drugs and the laboratory monitoring of antiretroviral therapy. Information on the epidemiology and laboratory investigation of other pathogens has also been brought up to date. Several new, rapid, simple to perform immunochromatographic tests to assist in the diagnosis of infectious diseases are described, including those for brucellosis, cholera, dengue, leptospirosis, syphilis and hepatitis. Recently developed IgM antibody tests to investigate typhoid fever are also described. The new classification of salmonellae has been introduced. Details of manufacturers and suppliers now include website information and e-mail addresses. The haematology and blood transfusion chapters have been updated, including a review of haemoglobin measurement methods in consideration of the high prevalence of anaemia in developing countries. Designed to help medical students through their exams. Built around the successful 'Essential Revision Notes for MRCP', this title focuses on what is essential learning for medical

undergraduates and gives readers an 'all round' knowledge of medicine at this level. This comprehensive textbook is the key resource for postgraduate trainees or residents in haematology. Now in its seventh edition, the book continues to provide everything the reader needs for examination preparation or clinical practice. Postgraduate Haematology discusses up-to-date knowledge of the pathogenesis, clinical and laboratory features, management and treatment of a wide range of blood and bone marrow disorders in a concise and user friendly style. It presents essential information for everyday use and teaching, as well more detailed scientific background for more in-depth reading, accompanied by thoughtful referencing. The clearly illustrated full-colour figures and charts demonstrate key facts, and are supplemented by numerous high quality photomicrographs of blood cells and tissues. Over 51 chapters from international authors, including the WHO Classification of Haematopoietic and Lymphoid Tissues, Postgraduate Haematology provides an expert review of malignant and non-malignant haematology. New sections reflect advances in the specialty, e.g. knowledge gained from new generation sequencing, latest anticoagulant drugs, diagnostic laboratory tools, and treatment strategies. Superb four-color illustrations and photomicrographs of blood cells and tissues throughout. Includes algorithms to aid with decision-making for treatment. Companion website featuring figures and tables from the book. Arm yourself with the textbook of choice for trainees and practitioners in haematology. A discussion of clinical haematology, which balances fundamental theories with clinical applications. It includes learning aids, such as chapter outlines and objectives, case studies, protocols, review questions with answers, and more. New to this edition are: separate chapters on anaemias and other erythrocyte disorders; a chapter on molecular genetics and morphology; an expanded instrumentation chapter featuring sample problems; more information on lupus inhibitors, including tests for detection; expanded coverage of platelet aggregation; revised information on acute leukaemia explaining features of each type of myelogenous or lymphoid leukaemia; section headings; and a two-colour design. A separate colour plate section allows the reader to view and differentiate haematologic disorders. For more than 65 years, this best-selling text by Drs. Barbara J. Bain, Imelda Bates, and Mike A. Laffan has been the worldwide standard in laboratory haematology. The 12th Edition of Dacie and Lewis Practical Haematology continues the tradition of excellence with thorough coverage of all of the techniques used in the investigation of patients with blood disorders, including the latest technologies as well as traditional manual methods of measurement. You'll find expert discussions of the principles of each test, possible causes of error, and the interpretation and clinical significance of the findings. A unique section on haematology in under-resourced laboratories. Ideal as a laboratory reference or as a comprehensive exam study tool. Each templated, easy-to-follow chapter has been completely updated, featuring new information on haematological diagnosis, molecular testing, blood transfusion- and much more. Complete coverage of the latest advances in the field. An expanded section on coagulation now covers testing for new anticoagulants and includes clinical applications of the tests. The intention of this book is to illustrate many of the commoner classical signs of disease and illness that will be encountered in the clinic. It includes signs occurring with cardiovascular diseases, gastrointestinal and renal disorders, and respiratory diseases. This volume contains the Proceedings of a Conference on Scientific Aids in Hospital Diagnosis held at Oxford in April 1975. The Conference, organised on inter-disciplinary lines, was the fourth to be organised by the U. K. Liaison Committee for Sciences allied to Medicine and Biology (SAMB). The subject matter is divided into six sections: Investigations in Pathology, Radiation Diagnostics, New Diagnostic Techniques in Special Departments, Clinical Measurements in Wards, Coordination and Communication of Results, and finally Ergonomic Contributions to Medical Diagnosis. Session IV may be found of particular interest as it puts the point of view of the nurses who have to operate so many of the new machines and pieces of equipment, often under stressful conditions. We were fortunate in having as our Guest Speaker, Sir George Godber, Former Chief Medical Officer to the Department of Health and Social Security. Sir George's career has spanned the time during which very many scientific techniques have been introduced into medicine and few people could be better qualified to give an overall picture of the present situation. The book highlights intricate predisposing factors for pathogenesis of nutritional anemia. It delivers valuable information related to this public health hazard influencing the nutritional health of preschool children. The book is valuable for readers in diverse fields to gain insight of the concept of nutritional anemia in preschool children. Additionally, book furnishes clinical and laboratory methods in a comparative way to assess nutritional anemia. Impact of the disorder on health of preschool children has been covered in a simple language. The book mentions need for interventional strategies for the management of nutritional anemia. Infants, preschool children and women during pregnancy and lactation are highly susceptible to dietary deficiency of iron, folic acid and cyanocobalamin leading to comparatively, higher predisposition to development of nutritional anemia. The condition has myriad of ill effects on nutritional health of preschool children. 'User-friendly' format ideal for exam preparation, concise text clearly integrated with high-quality colour clinical photographs, unique approach allows review of a wide selection of cases during short clinical attachments, and an essential resource for students and health care specialists in all fields of medicine. Essential Haematology is the leading undergraduate haematology textbook. The second edition achieved sales in excess of 34,000 copies and this thorough revision which is now illustrated in full colour throughout, will place it even further beyond the reach of its competitors. Directed to clinical students, laboratory technicians, and physicians studying for MRCP and MRCPath examinations, this text provides a general summary of both clinical and laboratory aspects of haematology. It covers aetiological aspects, clinical symptoms and signs, laboratory findings, differential diagnosis and treatment of blood disorders. Sections on the normal physiology, biochemistry, biology and molecular biology of the blood cells and clotting factors are included as is the physiology of normal haemopoiesis and lymphocyte development, and of the functions of blood cells. This new edition includes a chapter on blood transfusion and the appendices include details on cytogenetics and monoclonal antibodies in haematological diagnosis. Expanded sections in the new third edition cover haemopoiesis and growth factors, haemoglobinopathies, oncogenes and the aetiology of the leukaemias, bone marrow transplantation, myelodysplasia, AIDS, and the molecular biology of the clotting factors, protein C and S. Full-colour illustrations including clinical pictures, line diagrams, photomicrographs, x-rays, CT scans and ultrasound pictures support the text throughout. Atlas of Clinical Avian

Hematology is a practical guide to the hematological characteristics of birds. Illustrated throughout with many color photographs, this rich resource aids interpretation of hematological data, and promotes the accurate classification of hematological cells and identification of pathological changes. Covering over 100 species of birds, the Atlas illustrates the general hematological characteristics of birds; the hematological variations encountered between the different Orders of birds; and the hematological responses to disease of birds, using clinical cases from many species of birds and a range of clinical disorders. Describes how to collect and handle blood samples from birds to best preserve the quality of the blood. Highly illustrated, color guide to the hematological characteristics of birds Case data and images illustrates the avian hematological responses to disease First multi-year cumulation covers six years: 1965-70. Crash Course – your effective every-day study companion PLUS the perfect antidote for exam stress! Save time and be assured you have the essential information you need in one place to excel on your course and achieve exam success. A winning formula now for over 20 years, each series volume has been fine-tuned and fully updated – with an improved full-colour layout tailored to make your life easier. Especially written by senior students or junior doctors – those who understand what is essential for exam success – with all information thoroughly checked and quality assured by expert Faculty Advisers, the result are books which exactly meet your needs and you know you can trust. Each chapter guides you succinctly through the full range of curriculum topics, integrating clinical considerations with the relevant basic science and avoiding unnecessary or confusing detail. A range of text boxes help you get to the hints, tips and key points you need fast! A fully revised self-assessment section matching the latest exam formats is included to check your understanding and aid exam preparation. The accompanying enhanced, downloadable eBook completes this invaluable learning package. Series volumes have been honed to meet the requirements of today's medical students, although the range of other health students and professionals who need rapid access to the essentials of haematology and immunology will also love the unique approach of Crash Course. Whether you need to get out of a fix or aim for a distinction Crash Course is for you! Provides the exam syllabus in one place - saves valuable revision time Written by senior students and recent graduates - those closest to what is essential for exam success Quality assured by leading Faculty Advisers - ensures complete accuracy of information Features the ever popular 'Hints and Tips' boxes and other useful aide-mémoires - distilled wisdom from those in the know Updated self-assessment section matching the latest exam formats – confirm your understanding and improve exam technique fast With over 20 real patient cases and outcomes, this title in the Clinical Cases Uncovered series is designed to help students and junior doctors learn how to recognise and understand significant diseases in haematology. Each case covers the history taking, examination, investigations and management of a particular disease, with question and answer sections to tie in the underlying basic and clinical science and help build further knowledge and understanding. At the end of each case there is a review to consolidate learning with a self-assessment section containing MCQs, EMQs and SAQs. Including colour blood films, haematology slides and patient photos throughout to reinforce learning, understanding and investigative skills, Haematology: Clinical Cases Uncovered helps prepare for life on the wards. Haematology CCU is now available as a mobile app for iPad, iPhone and iPod touch. Download it for FREE <http://itunes.apple.com/gb/app/haematology-clinical-cases/id425126264?mt=8> to access the basic science, recommendations on how to approach your patient, and the first clinical case. There are a further 22 cases available separately as in-app purchases. Highly Commended at 2012 BMA awards in Internal Medicine Category. Recognized worldwide as the standard reference work, Dacie & Lewis Practical Haematology is a must have reference for any haematology laboratory. It covers all of the techniques used in the investigation of patients with blood disorders, including the latest technologies as well as the tried and true manual methods of measurement. It discusses the principles of each test, possible causes of error, the rationale for choosing one method over another and the interpretation, significance and clinical relevance of these findings. Each chapter conforms to a template, providing quick access to key information A–Z of Haematology provides an essential "quick reference guide" to definitions covering the entire spectrum of haematology, from blood transfusion and coagulation through to recent advances in molecular haematology. It is the indispensable guide for all those practising or studying haematology including research scientists and biomedical scientists working in diagnostic laboratories. Scientists working in cytogenetics and immunophenotyping will also find it a valuable repository of relevant knowledge. A–Z of Haematology includes: Definitions cover the entire spectrum of haematology, from blood transfusion and coagulation through to molecular haematology Essential "quick reference guide" for all those practising or studying haematology Over 100 figures to explain and clarify difficult concepts Inclusion of all CD numbers and oncogenes to be encountered in daily practice Appendices of laboratory data and normal values included In the second edition of the book a detailed and authoritative exposition of basic principles of oral and maxillofacial surgery is presented in altogether 50 chapters under 12 sections. From basic oral surgical procedures encountered by general practitioner to advance and complex surgical procedures that need to be referred to an oral and maxillofacial surgery specialist, all are covered in sufficient detail with a judicious mix of text and illustrations including clinical photos, radiographs, CT and CBCTs. Consists of 2454 high resolution clinical images, for better clarity of the surgical concepts in step wise manner; 400 neatly drawn anatomical line illustrations, valuable for preparation during exams; and 150 tables and more than 180 boxes for better understanding of the discussed core concepts Includes chapters like Emergency Management and Preliminary Examination of a Trauma, Basic Principles in Management of Maxillofacial Injuries, Dentoalveolar Fractures, Mandibular Fractures, Maxillary Fractures, Orbitozygomatic complex, Naso-orbito-ethmoid Fractures and Frontal Fractures in Section XI on Maxillofacial Trauma Contains chapters on Local Anaesthesia, Armamentarium, Impaction, Exodontia, Implantology, Orofacial Clefts and Distraction Discusses important concepts like Definitions, History Taking, Radiodiagnosis, Biochemical, Haematological and Microbiological Investigations, Histopathological Investigation, Impaction, Endodontic Surgery Covers recent advances: Bone Substitutes, Bioresorbable Plates, Lasers in Oral Surgery, Piezoelectric Surgery and Robotic Surgery along with a chapter on Medicolegal Considerations in Dentistry – General Principles of Evaluation and Management – Incisions and Flaps –

Haemorrhage and Shock – Potential Spaces and their Management – Odontogenic Tumours – Nonodontogenic Tumours – Oral Cancer – Management of Jaw Tumour – Anatomy of TMJ – Internal Derangements and Condylar Dislocation – TMJ Disorders – TMJ Ankylosis The second edition of Essentials of Haematology brings students fully up to date with common haematologic disorders and blood transfusion, with an emphasis on pathogenesis, diagnosis and treatment. Divided into five sections, topics include blood physiology, red and white blood cell disorders, haemostasis disorders and blood transfusion. Each chapter discusses the diagnosis and treatment of a different disorder and the final section describes transfusion techniques. This comprehensive new edition includes more than 400 full colour figures, tables and illustrations with descriptions to assist learning. Key points New edition bringing students up to date with common haematologic disorders and blood transfusion Emphasis on pathogenesis, diagnosis and treatment Includes more than 400 full colour figures, tables and illustrations Previous edition published in 2006 "Most hematologists need a revised and practical textbook in which they can rapidly search on the morning of a consultation... This book will be an important resource in such situations." New England Journal of Medicine A well established and respected review of hematology Postgraduate Haematology is a practical, readable text which will give trainees, residents and practising hematologists up-to-date knowledge of the pathogenesis, clinical and laboratory features and management of blood disorders. Postgraduate Haematology is ideal for: Trainees and residents in hematology Hematologists in practice Why Buy This Book? A well established and respected review of hematology Practical and readable text Essential information for everyday use as well as the scientific background Up-to-date knowledge of the pathogenesis, clinical and laboratory features and management of blood disorders Complete revision of all chapters and the addition of new chapters to reflect latest advances in the speciality
