Cannabis consumption, commerce, and control in
global history, from the nineteenth century to the present

day. This book gathers together authors from the new wave of cannabis histories that has emerged in recent decades. It offers case studies from Africa, Asia, the Americas, Europe, and the Middle East. It does so to trace a global history of the plant and its preparations, arguing that Western colonialism shaped and disseminated ideas in the nineteenth century that came to drive the international control regimes of the twentieth. More recently, the emergence of commercial interests in cannabis has been central to the challenges that have undermined that cannabis consensus. Throughout, the determination of people around the world to consume substances made from the plant has defied efforts to stamp them out and often transformed the politics and cultures of using them. These texts also suggest that globalization might have a cannabis history. The migration of consumers, the clandestine networks established to supply them, and international cooperation on control may have driven much of the interconnectedness that is a key feature of the contemporary world. Contains research project reports arranged by subject with descriptors from the EUDISED Multilingual Thesaurus. Over the years, various types of experimental projects have been carried out in Italy at different levels of education. CLIL practices have moved from limited small-scale experiments to elaborated projects involving technology, materials design and the

creation of CLIL networks. This volume is a collection of works by both language and content teachers at all levels of education who have, in the past six years, embarked on a CLIL-type journey. The book is organized into two sections; the first part highlights some considerations that are more theoretical in nature. The purpose is to provide moments of reflection on these issues and/or bring to light other matters that merit further discussion. The second part is more pragmatic in nature dealing with proposals and projects already implemented in schools and at University. The chapters extol the numerous studies that have been going on in this field in the past decades. They contribute to the existing research in terms of small-scale explorations that highlight the development of CLIL over the years, a cautious progress that has led professionals to move from initial steps or simple trials to more complex tangible CLIL learning objects. A testimony of diversity in approaches showing how rich and vibrant the field of CLIL studies is and will continue to be in the future. First multi-year cumulation covers six years: 1965-70.

Advances in Molecular Spectroscopy, Volume 1 covers the proceedings of the Fourth Meeting of Molecular Spectroscopy, held in Bologna, Italy on September 7-12, 1959. This book is organized into three parts encompassing 69 chapters. The first part presents first some experimental and correlations studies on

molecular structure, followed by discussions on the application of molecular spectroscopic techniques for molecular structure determination. Part II reviews experimental determination of Raman intensities, vibrations of aromatic rings, and IR spectra and electronic structure of various organic compounds. Part III considers the general theories on molecular spectroscopy. This topic is followed by surveys on electron energy, orbital valency, relations among potential energy of diatomic molecules, and determination of rotation structure. This book will be of value to molecular spectroscopists and analytical and organic chemists. Scientific collections, political power, and nation-building narratives in fascist Italy. Includes subject section, name section, and 1968-1970, technical reports. Contains research project reports arranged by subject with descriptors from the EUDISED Multilingual Thesaurus.
