Laboratory on the Nile Feb 27 2023 Explore the tropical medical research and findings of the British and Sudanese doctors and scientists in the 1900s! Laboratory on the Nile describes in detail the work of The Wellcome Tropical Research Laboratories in Khartoum, Sudan, that was under the direction of Dr. Andrew Balfour in the aftermath of the reconquest of The Sudan after the Mahdia period. As a student of tropical medicine or a medical or pharmaceutical historian, you will discover how the floating laboratory helped to advance tropical medicine as it was towed along the reaches of both the Blue and White Niles to gain clinical cases, collect specimens, and learn about the lives and customs of the Arab and Negroid Sudanese. Based on the complete set of

reports and reviews of the Wellcome Tropical Research Laboratories, Laboratory on the Nile presents a summary of the military and political matters that brought the British and Dervish forces of the Mahdia into armed conflict. You will explore how the conqueror, Kitchener of Khartoum, led his people toward civilization with an educational movement that allowed industrial philanthropist Henry S. Wellcome to provide the means for medical research. Complete with multiple photos and drawings of the period (1899-1913), Laboratory on the Nile covers the research of what became a world-renowned center of excellence in tropical disease research. In Laboratory on the Nile, you will discover research that revealed brutal and superstitious practices such as female circumcision, mutilation, crude surgery, barbaric medical practices, the inhumane treatment of those thought to be possessed by devils, and the reliance on charms and mystic-religious practices. Within this historical work you will also explore: research on tropical diseases and the collection of plants, insects, blood samples, and photographs of diseased individuals research on the Nile river, and in agricultural developments, dealing with famines from failed harvests eradicating the mosquito and instilling sanitary conditions in Sudan to halt the spread of diseases and ailments such as dysentery, enteric fever, malaria, measles, and chicken-pox fascinating accounts of Dervish medicine that was a combination of savage quackery and charlatan tricks investigations into tropical medicine, hygiene, parasitology, and sanitation the efforts used to treat the Kal-azar disease which has a long and fatal history in Africa, Asia, and Latin America detailed accounts of early research expeditions that examined the people themselves, their customs, superstitions, and traditional medical practices Laboratory on the Nile is an in-depth look at the tropical medical research and studies that were conducted to benefit the people of The Sudan in fighting diseases. You will gain considerable insight into this fascinating and historical account of these world-renowned

research efforts that have helped medicine become what it is today.

Unlike some other reproductions of classic texts (1) We have not used OCR(Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.

Report of the Wellcome Tropical Research Laboratories at the Gordon Memorial College, Khartoum Sep 29 2020 This

historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1904 edition. Excerpt: ...developed. Contained '014 per cent. HCN. The investigation of cyanogenesis in all the

fodder plants used in the Sudan and in certain of the leguminosaj, is a piece of research a chemist might carry out with advantage.

49 General Routine Work The nature of this work may be classed under two main headings: 1. Pathological; 2. Chemical. It bulked so largely that little time was afforded for original investigations, but then again some of it was really more or less research work; and in any case the mere fact that so much had to be done thus early in the laboratories' career, seems to show that they have filled a felt want. Under each of the above headings is placed a list of the examinations and analyses performed.

1. Pathological Nature No. (a) Morbid secretions and excretions.... 16 (b) Blood 20 (c) Bacteriological apart from (a).... ('i (d) Parasites apart from (a) and (b).. 5 (e) New growths..... 4 (/) Other pathological conditions..... 3

It may be as well to indicate some of the forms of disease encountered and included under these figures, and also to deal briefly with the more common diseases found in the Sudan. The classification adopted by Wellman¹ for the diseases of Angola is here introduced for the sake of convenience.² The Anglo-Egyptian Sudan is a huge territory inhabited by many divers races of men, and possessing several types of climate. One could no more scientifically compare the diseases found in the neighbourhood of Suakin with those prevalent in the Khartoum district than one could compare the latter with those occurring in the Bahr-El-Ghazal. On the Red Sea coast the climate is that of a littoral; it is the Northern Sudan climate modified by proximity to the sea. Round about Khartoum there exists, roughly...
