The Origins of Living Planets Oct 23 2020 I try to convince my reader that Earth is so special and unique that it's worth saving. I do this by starting out with space travel, distance to other planets the very low likelihood of aliens visiting us. The book comes in two sections: first section is about the unlikelihood and difficulties of space travel; the second section is about environmental damage and species endangerment. We can't just pick up and move to another planet

Contemplating Climate Change Dec 17 2022 Global climate change policy has failed us all, but what is the reasoning that underlies this failure? Why are some people more disposed to reflect on confounding issues like climate change, recognise the danger, seek a solution, and act

accordingly, more than others? This book is concerned with how we think and act in response to climate change. In particular, faced with deep uncertainty and the multifaceted complexities that characterise the climate change conundrum, how the various actors and institutions involved in the policymaking process make decisions that both aid and impede in the design and implementation of climate change policy. This book focuses on how these actors and institutions frame and use the knowledge available - under conditions of competing ideologies and interests - and synthesise it to form often-disparate mental models, or worldviews, that inspire them to become firm advocates of meaningful climate change action or indeed, sceptics that continue to downplay the threat, and hence the need for urgency. By exploring how we think about climate change and the disparate mental models we hold as a result, this book explores why humankind has thus far failed in its endeavours to solve the climate change problem. This book will be of great interest to students and scholars of climate change, environmental policy and environmental psychology.

Optimizing Widely Reported Hospital Quality and Safety Grades May 18 2020 This practical, engaging book provides concise, real life-tested guidance to healthcare teams concerned with widely reported and incentivized hospital quality and safety metrics, offering both a conceptual approach and specific advice and frameworks for reviewing quality and safety numerator

events, from the perspective and experience of clinicians and administrators working within the Ochsner Health System. The text opens with the rationale for closely managing widely (including publicly) reported hospital patient quality and safety measures. Attention is given to the financial implications of quality performance, with respect to both penalties and payment incentives used by payer organizations. It then reviews the major public ratings and their relevant methodologies, including CMS, AHRQ and NSHN. In addition, it addresses ratings by proprietary organizations that have a large member clientele, such as Vizient, USNews, Leapfrog, Healthgrades, CareChex and others. Each metric - for example, the AHRQ Patient Safety Indicators (PSIs), and other metrics such as readmission rate, risk adjusted complications, hospital-acquired conditions and mortality - is addressed in a stand-alone chapter. For each, the importance, approach to review, opportunity for optimization, and engagement of healthcare staff are reviewed and discussed. Overall, this book forefronts the benefits of a collaborative approach within a health system. The concurrent review process,

multidisciplinary collaboration among quality improvement, clinical documentation, coding and medical staff personnel are all emphasized. Also described in detail is the approach to and specific opportunities for medical staff education and engagement. Additional key topics include Engagement of the Medical Staff and House Staff (i.e., residents and other trainees), Futile Care, Surgical Quality Improvement (NSQIP), Nursing Provider Partnership, and Translation of Data Review to Successful Performance Improvement. Specialty chapters on pediatric, neurologic and transplant quality metrics are also included.

The Pursuit of Myth in the Poetry of Frank O'Hara, Ted Berrigan and John Forbes Apr 28 2021 The Pursuit of Myth in the Poetry of Frank O'Hara, Ted Berrigan and John Forbes traces a tradition of revolutionary self-mythologising in the lives and works of Frank O'Hara, Ted Berrigan and John Forbes,

as a significant trefoil in twentieth-century English language poetry. All three had untimely deaths, excited a collective homage, and developed cult followings that reverberate today. This book tracks the transmission of the poem as charm, the poet as charmer, and the reinstitution of troubadour erotics as a kind of social poetics. Starting with Orpheus, the book refreshes the myth of the poet as mythmaker, examining how myths of "self" and "nation" are regenerated for the twenty-first century and how persons-as-myths are made in community through coterie of artists and beyond. Duncan Bruce Hose's critical vocabulary, with its nucleus of mythos, searches the edges of phenomenal enquiry, closing in on the work of "glamour", "aura", "charm", "possession", "phantasm", the "daemoniac", and the logic of haunting in the continuing being of these three poets as "charismatic animals".

Glaciers and Ice Sheets in the Climate System Aug 01 2021 Our realisation of how profoundly glaciers and ice sheets respond to climate change and impact sea level and the environment has propelled their study to the forefront of Earth system science. Aspects of this multidisciplinary endeavour now constitute major areas of research. This book is named after the international summer school held annually in the beautiful alpine village of Karthaus, Northern Italy, and consists of twenty chapters based on lectures from the school. They cover theory, methods, and observations, and introduce readers to essential glaciological topics such as ice-flow dynamics, polar meteorology, mass balance, ice-core analysis, paleoclimatology, remote sensing and geophysical methods, glacial isostatic adjustment, modern and past glacial fluctuations, and ice sheet reconstruction. The chapters were written by thirty-four contributing authors who are leading international authorities in their fields. The book can be used as a graduate-level textbook for a university course, and as a valuable reference guide for practising

glaciologists and climate scientists.

Theory of Macroeconomic Policy Aug 21 2020

Theory of Macroeconomic Policy reviews the theoretical foundations of macroeconomic, fiscal, and monetary, policy. It offers a panoramic view of macroeconomic theory, covering a wide range of topics that are not customarily dealt with in macroeconomics texts, as well as more standard material. Advanced theory is bridged with more elementary or intermediate material, and established models are reviewed alongside current research directions. There is an extensive review of empirical evidence on virtually every topic, supplemented by narrative accounts for various episodes. The policy implications of the various theories are emphasised throughout. The chapters are largely self-contained so that different courses can focus at different places. A 'Guidance for Further Study' Section and extensive bibliography give plenty of ideas for all levels of independent study, from Undergraduate Projects to MSc Dissertations to PhD Theses. Theory of Macroeconomic Policy presents a balance between: breadth as well as depth; analytical treatment and intuition; theory and evidence; vintage theories and current directions; theory and

policy; (established) theory and debate. Theory of Macroeconomic Policy is an affirmation that there is a well-developed body of theory that is invaluable for an in-depth understanding of the macro-economy and policy; equally, there is much scope for critical discussion and debate.

The Stakeholder Balance Sheet Feb 13 2020
This book provides an as yet unavailable tool, the Stakeholder Balance Sheet, enabling managers within any organisation to unlock the DNA of the market place in which they operate and to measure their effectiveness in understanding their markets and all the key stakeholders operating within them. This simple tool provides self-testing checklists at the end of each chapter that enables managers to look at stakeholder-sensitive issues in the same way that they might scrutinise financial statements (hence it will not seem alien to most managers). A review of how well your organisation has fared on the questions will tell you how healthy your "balance sheet" is in relation to the topic of each chapter,

and it will provide you with the basis for an overall enterprise balance sheet that aggregates the scores you have achieved in each topic area. Lessons to learn from application of the Stakeholder Balance Sheet are: What appropriate tools are still required to enhance their understanding of the market place, and how these should be utilised How to maximise commercial success through understanding the market place And, find effective ways of being a truly stakeholder-sensitive enterprise In a nutshell, a genuine understanding of how customers and other stakeholders think, feel and behave offers the essential starting point for any general manager - not just the marketing or sales specialist - seeking to determine the direction of his organisation. For the purpose of the book, stakeholders are described as: the direct stakeholders in the market place - customers and prospects (including both the key contacts with whom you interface and others who may influence the final decisions made); the internal stakeholders - staff; other external stakeholders - pressure groups, local community, government, intermediaries, banks, etc. "My 40 years of international business experience would completely endorse

this total focus on the stakeholder balance sheet." –Sir Peter Bonfield CBE FREng, Chairman of NXP Supervisory Board and formerly CEO of BT Group plc and ICL plc
"The Stakeholder Balance Sheet is an excellent and highly practical framework...This book is a must-read for decision makers in any organization, regardless of level or function." –Professor Sharan Jagpal, Professor of Marketing, Rutgers Business School & author of Fusion for Profit

Trends in Statistical Codicology Dec 05 2021
The application of statistical techniques to the study of manuscript books, based on the analysis of large data sets acquired through the archaeological

observation of manuscripts, is one of the most original trends in codicological research, aiming not only to reconstruct on a sound basis the methods and processes used in book manufacture and their tendential evolution in space and time, but also to interpret them as the result of a dynamic interplay between various and often incompatible needs (of cultural, technical, social and economic nature) that book artisans had to reconcile in the best possible way. The present collection of essays in English translation was guided by the desire to offer a multifarious well-articulated picture of the application of statistical methodology to the various aspects of manuscript production, namely analysis of materials, characterization of book types, manufacturing techniques, planning and use of layout characterization of scripts and scribal habits. The volume aims to present to a wider readership a series of significant papers which have appeared over the last fifteen years, by means of which the statistical approach continues to demonstrate its vast potential.
