Automobile Products Liability and Accident Reconstruction Jun 18 2020

Strengthening Resilience in Post-disaster Situations Apr 16 2020 To mitigate, develop, and improve the lives of those vulnerable to intense natural disasters, climate change, and food insecurity, many agencies are funding and implementing diverse activities from reconstruction to rehabilitation, and this book presents the lessons and impacts from a collection of these projects. It describes concepts, strategies, processes, and tools in such a way that they can be easily replicated and shared with a wider audience. This study explains that mid- to long-term interventions, strategies, and practical approaches in particular are being designed and adopted to build the resilience of the poor. It describes valuable practical experiences and lessons from the field, capturing a range of interventions from implementing agencies involved in post-disaster rehabilitation. It is comprised of 79 papers grouped into four sections: coastal threats and challenges in South Asia; disaster risk reduction and the combining of resilience, mitigation, and adaptation; pathways for building the capacity of vulnerable communities to withstand and rebuild from natural disasters; and real-life postdisaster rehabilitation and resilience-building projects that have led to positive change at the community level. This is an exceptional resource for anyone concerned with disaster management and rehabilitation work, including students, researchers, policymakers, and members of nongovernmental organizations.

OPERATIONS RESEARCH Nov 04 2021 Primarily intended for postgraduate students of management and computer applications, this book presents the theory and applications of operations research in an easy-to-read style. It introduces the readers to various models of operations research, such as transportation model, assignment model, inventory model, queuing model, replacement model, sequencing model, and integer programming model. The various methods to solve real-life problems faced by managers are also fully analyzed. Separate chapters are devoted to Linear Programming, Decision Theory, Game Theory, Dynamic Programming, and Project Management, which greatly help the decision-making process. The text features numerous fully worked-out examples, a fairly large number of exercises, and end-of-chapter theoretical questions which enhance the value of the text.

Besides postgraduate students of management (MBA), computer applications (MCA), commerce, mathematics, and statistics, students of engineering will also find this text extremely useful.
