What is the job outlook for pharmacy technicians? According to the United States Department of Labor studies, the pharmacy technician profession is expected to experience faster than average growth through the year 2020 and beyond. The rising age of the population coupled with the shortage of pharmacists and a health care system that is being forced to become ever more cost conscious, has thrust the pharmacy technician position into the limelight. Pharmacies that once might have used two pharmacists are now using one pharmacist and two or three pharmacy technicians. Estimates for growth in the profession have run as high as 31% growth over the next few years. Opportunities are especially bright for those pharmacy technicians who choose to become nationally certified. More and more states are requiring certification as a prerequisite to technician practice, and the possibility of this becoming a nationwide requirement is real. What do employers look for in a pharmacy technician applicant? First and foremost...training. An employer is not necessarily interested in previous pharmacy experience, but training. Believe it or not, most retail employers would prefer an applicant who has gone through a good preparatory program and demonstrates other personal characteristics like friendliness and attention to detail over a technician with experience from another retail chain. Why would that be? Well, if they were to hire the applicant who has experience at another chain, the employer would need to retrain the new associate and break old "habits" from the other workplace. Often these old "habits" are harder to break than to train a brand new associate, if the applicant has the basic pharmacy skills under their belt already. What does a pharmacy technician earn? According to the United States Department of Labor studies, the median wage of ALL pharmacy technicians across the country was \$13.65 in 2010 (their last published

survey). Since that time, wages have continued to move upward. This pharmaceutical study guide is far from just that, This text give the reader some GOODIES!! over 800 plus exam questions, colorful interpretive exercises, dose calculations, pharmaceutical product analysis, difficult "script" exercises, and pharmaceutical recipes co-created by Stacey Murrell.....
