"Get Inside God's Head" tells how to activate the pre-installed personal spiritual GPS God gave us at all at birth. Activation, the book says, consists of learning and using the Common-sense-as-spiritual-GPS Principle. The author of the book, a former Eastern Orthodox Christian priest using the pen name Once-Reverend Basil, recounts the 50-year spiritual odyssey that led to his discovery of the principle. The odyssey culminated in a dramatic spiritual Aha moment, followed by a Eureka moment, which awakened the then-clergyman from a state of "spiritual zombee-ism" under whose spell he had been living since his formative years as a Roman Catholic. His religious faith, like that of most believers, had forbidden him to use common sense when it came to spiritual matters. His spiritual Aha convinced him God wouldn't have given him the inborn gift of common sense and then not expected him to use it for everything, spiritual matters included. Once free to do that, he realized that his half-century search for the perfect church had been in vain--that he could trust no one but himself and his God-given gifts, comprising a very real sixth sense, for accurate direction along the spiritual path God wanted him to follow. The process he discovered for using his inborn gifts resulted in formulation of the

Common-sense-as-spiritual-GPS Principle. Validating the principle inspired the now Once-Reverend Basil to make a personal Declaration of Spiritual Independence. It begins: "My spiritual trust, I place only In God, my Father Almighty, the maker of all things, visible and invisible; and in the true and real sixth sense He instilled in me at birth to provide certain spiritual direction . . . " The book reveals a simple easy-to-use process for applying the Common-sense-as-spiritual-GPS Principle to answer everyday spiritual questions and resolve moral/ethical dilemmas. In the process, it illustrates how difficult it was for Basil to escape the narrow, tunnel-vision mindset of organized religion and begin making personal spiritual decisions he is certain have God's stamp of approval. This Manual will help you to grow and multiply your small group. Manual of Geospatial Science and Technology shows how to work across the range of geospatial science and technology, whether as a user or as a contractor of services employing these technologies, and without either specialist education or substantial experience. The manual covers the fundamentals, providing the requisite mathematics, computer science and physics necessary to understand how the technologies work, assuming some elementary background in calculus and physics. It also shows how the technologies can be used together and focuses on their commonalities. A number of applications such as mapping and environmental modeling are presented, and a Web site accompanies the book. [CLICK HERE](#) to download the first chapter from Wilderness GPS * Simple, focused, and accessible, Wilderness GPS is for anyone using GPS in an outdoor setting * Trust us: first-timers need help to use their new backcountry GPS devices * From the authors of the bestselling Wilderness Navigation (65,000 copies sold) Thousands have learned compass and map skills with the help of father-and-son team Bob and Mike Burns and their straightforward, simply explained book, Wilderness Navigation. Now they've written a book for everyone who has bought a backcountry GPS device and found it inexplicably complicated to use (which includes most of us). Wilderness GPS is an easy-to-use guide to get you navigating the outdoors with your handheld GPS device. Wondering how to choose from the variety of gear and computer programs, or how to use a GPS with your map and compass effectively? Wilderness GPS details this and more including: * How to select your GPS gear * Getting started and practice routines * Different coordinate systems: latitude and longitude vs. Universal

transverse Mercator (UTM) * Routefinding in wilderness settings, including common scenarios * GPS vs. map and compass routefinding * Using GPS on water * Using your GPS with a home computer or mobile "smart" device Bob Burns and Mike Burns are the authors of Wilderness Navigation, a nationally bestselling primer that serves as the official textbook for navigation courses taught by The Mountaineers and other outdoor education centers. Together, they have decades of professional experience in teaching map and compass, GPS, and navigation in the outdoors and have hiked, scrambled, climbed, and snowshoed all over the West Coast and beyond. They both live in Seattle. This manual is a complete user manual for Garmin handheld receivers. It covers theory and practical applications for gps technology and the receivers that use this technology. Representative products for all of the Garmin handheld receivers, past and present, are explained and tips are given on getting the most out of each model. It is designed to augment the user manuals that are supplied with each product but is complete enough to replace them. While this manual is Garmin specific it provides a basic understanding of gps devices that is applicable to any gps receiver. It was written over a period of 4 years and has been reviewed and tested by hundreds of users over that period. It has been used as the reference for training on gps usage. Because of its unique approach that develops the theory behind operation as well as specific details, it provides a basis that will allow a user to be able to use any gps receiver. Skills in the use of a gps will provide assurance and safety for the user. Topics extend beyond just operating the unit to actually being able to use it for navigation on the land, in the sea, or in the air. Topics are applicable whether you are hiking or driving to your destination. These topics include product operation, waypoints, routes, tracklogs, navigation, maps and databases, product selection, features, theory, accessories, and product unique functions. The Accurate Time-Linked data Acquisition System (ATLAS II) is a small, lightweight, time-synchronized, robust data acquisition system that is capable of acquiring simultaneous long-term time-series data from both a wind turbine rotor and ground-based instrumentation. This document is a user's manual for the ATLAS II hardware and software. It describes the hardware and software components of ATLAS II, and explains how to install and execute the software. advice while honoring the traditions hunters and fishermen have passed down for generations. GPS For Dummies gives new meaning to finding yourself. In fact, with a GPS (global positioning system) receiver, you can determine precisely where you are anywhere on this planet. If you're are planning on buying a GPS receiver or if you have one and want to get your money's worth, this guide tells you what you need to know, including: Basic GPS principles and concepts such as waypoints, routes, tracks, and coordinate systems Recommended features for GPS receivers to be used in various types of activities, including hiking, mountain biking, cross country skiing, geocaching, hunting, ATVing, mapping, and more How to do digital mapping on your computer, including software packages you can use to work with aerial photos, topographic maps, and road maps The main providers of digital map data for the U.S. and their Web sites The scoop on geocaching—a high-tech treasure hunt Written by Joel McNamara, avid outdoorsman, adventure racer, search and rescue team member, and author of Secrets of Computer Espionage, GPS for Dummies is ideal for both ordinary travelers and exotic explorers. It covers a world of GPS info such as: Choosing features for a GPS receiver, including the screen, an alarm, built-in maps, an electric compass, an altimeter, antennas, interface modes, and more Systems for traveling on the main roads and systems for exploring off the beaten path Using GPS with a PDA (personal digital assistant) Computer requirements for different mapping choices Topographic map software from Maptech, DeLorme, and National Geographic that's for off-road use Using Web-hosted mapping services, including street maps, topographic maps, aerial photos, and U.S. government-produced maps Incorporating GPS receivers into outdoor workouts, with tips for specific sports including cycling, golf, rowing, and more A companion Web site has links to all kinds of free maps and resources. So explore on your computer and then explore for real! With GPS for Dummies, you'll find yourself having adventures! This book shows how to build a "INFelecPHY GPS Unit" (IEP-GPS) tracking system for fleet management that is based on 3G and GPRS modules. This model should provide reliability since it deals with several protocols: 1) HTTP and HTTPS to navigate, download and upload in real time the information to a web server, 2) FTTP and FTTPS to handle in a non-real time the files to the web application, and 3) SMTP and POP3 to send and receive email directly from the unit in case of any alert. Similar to a mobile device, but without screen for display, it is multifunctional because it links to a GPRS module, a camera, a speaker, headphone, a keypad and screen. This book constitutes the refereed proceedings of the 7th International Conference on Pervasive Computing, Pervasive 2009, held in Nara, Japan, in May 2009. The 20 revised full papers and 7 revised short papers presented were carefully reviewed and selected from 147 initial submissions. The papers are organized in topical sections on digital displays, navigation, at home with pervasive applications, sensors, sensors, everywhere, working together, tagging and tracking, methods and tools, and the importance of context.
