The Big Book of Word Problems: Years 1 & 2 pack includes: - Illustrated big books - Teachers' book of notes and photocopiables - CD-ROM with PDFs of all the word problems Kindergarten Word Problems : Addition and Subtraction within Ten { Ideal for Special Education } for Kindergarten, Word Problem Kindergarten : This pack includes 31 addition and subtraction word problems workbook designed for students to "Read-Along, Sketch and Solve." The format is ideal for special education, intervention groups or guided math groups. Each problem is presented in a full-page format to give students enough space to investigate multiple ways to solve the problem. The word "sketch" is intentionally used on all pages. Before students begin work, we often discuss how to represent objects using quick sketches as opposed to time-consuming detailed pictures. These word problems for kindergarten are designed with the rigor of the Common Core in mind and support the following standards: CCSS.Math.Content.K.OA.A.2 Solve addition and subtraction kindergarten word problems, and add and subtract within 10, e.g., by using objects or drawings to represent the problem.

CCSS.Math.Content.1.OA.A.1 Use addition and subtraction within 20 to solve kindergarten math word problem involving situations of adding to, taking from, putting together, taking apart, and comparing, with unknowns in all positions, e.g., by using objects, drawings, and equations with a symbol for the unknown number to represent the problem. (These are beginning of the year first grade problems - working within groups of ten.) Each sheet

includes: A place for students to sketch the problem. A ten frame for students to utilize. I encourage students to cross out items that are taken away as they work with the ten frame for subtraction. A number path on which students show their work. A space for an equation. A space to fill the answer in. As I introduce the first few word problems kindergarten with a group, we work through each section together and students complete each box on the sheet. Once students are familiar with the ways these sheets support their problem solving, I often have each student choose at least 2 ways to show and check their work. This allows each student to utilize the methods that are most efficient for him/her. I love to give students time to discuss why they chose certain methods to solve a problem! Each sheet includes an extension/bonus question at the bottom. These question cans be used in a variety of ways. Many parents want to help their child develop math concepts, but are not sure how. These bonus questions are perfect extension activities for students to discuss and complete at home with a family member. I love to see the extension work that students return! Many parents have commented that they appreciate the challenging nature of these questions. When these word problem kindergarten are used for whole-group instruction, it is common for some students to have completed tasks while others still need support. "Early finishers" can read-along with you as you introduce the bonus question, flip their paper over and work on this challenge question while you provide individual and/or small group instruction as needed. In this way, these bonus questions help teachers differentiate during group

lessons. Many thanks for stopping by and taking a look! Sincerely, Enjoy :) All Educate School Each Big Books of Word Problems set includes a fully illustrated big book to share with the class, a teachersa book of notes and photocopiables and PDFs on a CD-ROM so you can display the pages of the big book on your IWB. Research by cognitive psychologists and mathematics educators has often been compartmentalized by departmental boundaries. *Word Problems* integrates this research to show its relevance to the debate on the reform of mathematics education. Beginning with the different knowledge structures that represent rule learning and conceptual learning, the discussion proceeds to the application of these ideas to solving word problems. This is followed by chapters on elementary, multistep, and algebra problems, which examine similarities and differences in the cognitive skills required by students as the problems become more complex. The next section, on abstracting, adapting, and representing solutions, illustrates different ways in which solutions can be transferred to related problems. The last section focuses on topics emphasized in the NCTM Standards and concludes with a chapter that evaluates some of the programs on curriculum reform. *Word Problems Pupil Book* offers over 300 thought-provoking problems. This is the answer key of Volume 2 of the entire set of 12 volumes of word problems solving strategies. If you want to set a solid foundation in math, grasping the techniques on solving word problems is the key to it. This set of books teaches you the techniques and strategies you need to solve

word problems. Sample question in this volume: Mom is 36 years old. If Lily is 12 years old, how much older is Mom than Lily? Reasoning and solution: Each year in Mom's age finds a match from the years of Lily's age so some years in Mom's age do not have any matches. How many years in Mom's age do not have any matches? The 12 years that have found matches leave the group of 36 years so we subtract 12 years from 36 years to find how many years do not have any matches: $36 - 12 = 24$ years. Mom is 24 years older than Lily. The techniques on using the "than" method to solve problems with "more than or less than" in them, on using "matching games" to solve word problems with "how much more or how much less" in them, on using "combining" to do addition and on using "leaving a group" to subtract are covered in this volume.
