Compliance with stroke metrics is positively associated with improved health outcomes for patients recovering from acute stroke. Accurate and thorough nursing documentation of stroke metrics during this critical period is vital for the

interdisciplinary team. This documentation provides accurate monitoring of the condition of the patient and guides treatment interventions. Since the COVID-19 pandemic, the project site hospital stroke stepdown unit has dually, and at times, solely functioned as a unit that cares for COVID-19 patients. As a result, the focus on nurse-driven stroke metric documentation has declined. This quality improvement project was designed to assess if a stroke documentation educational intervention for registered nurses (RNs) on a stepdown stroke unit could affect their documentation compliance and knowledge of nurse-driven stroke metrics. The project used a combination of an educational video and reminder card to reinforce nurse-driven stroke metric knowledge and documentation compliance. The video reviewed where and when to document the following nurse-driven stroke metrics in patients' electronic health records (EHR): dysphagia screening, stroke education, smoking cessation, utilization of sequential compression devices, neurological assessments, and the National Institutes of Health Stroke Scale. A pre- and post-survey was used to measure nurse-driven stroke metric knowledge before and after the educational video. Results from the post-survey showed a statistically significant increase in knowledge, $Z = 3.04$, $p = .002$. Patient EHR chart audits measuring nurse-driven stroke metric documentation compliance before and after the educational interventions did not show any statistically significant changes in documentation compliance. The results of this project demonstrate that a multi-modal educational intervention can be used to

increase knowledge of a topic. This entertaining guide is now more fun, more up-to-date, and even easier to use -- an indispensable resource for nurses who want to take the stress out of dosage calculations. New to this edition are a chapter on dimensional analysis; numerous lighthearted learning aids called "Cheat Sheets"; and "Practice Makes Perfect" -- case study questions and answers that let nurses assess their progress. Contents include math basics; measurement systems; drug orders and administration records; calculating oral, topical, and rectal drug dosages; calculating parenteral injections and I.V. infusions; and calculating pediatric, obstetric, and critical care dosages. Welcome to the second edition of our dosage calculations book! Are you a nursing student, or nurse, who wants to learn a few simple methods of solving dosage calculations without a bunch of formulas? Would you like to raise your hand in your dosage calculation class, after the instructor explains a complicated formula, and ask to approach the white board to show the class a much simpler method? Do you want to go on your clinicals knowing that you have a solid foundation in dosage calculations? Do you want to walk into your Nursing Calculations Class on the first day knowing that you can ace all the tests before the course begins? If you answered yes to any of these questions, this book is for you! The book is divided into seven units containing thirty-five chapters. Unit 1: Essential Skills: You can't learn to drive a car if you don't understand the function of the steering wheel. The same applies to the following subjects when learning dosage calculations.
