The main aim of this practical Handbook is to strengthen counselling and communication skills of skilled attendants (SAs) and other health providers, helping them to effectively discuss with women, families and communities the key issues surrounding pregnancy, childbirth, postpartum, postnatal and post-abortion care. Counselling for Maternal and Newborn Health Care is divided into three main sections. Part 1 is an introduction which describes the aims and objectives and the general layout of the Handbook. Part 2 describes the counselling process and outlines the six key steps to effective counselling. It explores the counselling context and

factors that influence this context including the socio-economic, gender, and cultural environment. A series of guiding principles is introduced and specific counselling skills are outlined. Part 3 focuses on different maternal and newborn health topics, including general care in the home during pregnancy; birth and emergency planning; danger signs in pregnancy; post-abortion care; support during labor; postnatal care of the mother and newborn; family planning counselling; breastfeeding; women with HIV/AIDS; death and bereavement; women and violence; linking with the community. Each Session contains specific aims and objectives, clearly outlining the skills that will be developed and corresponding learning outcomes. Practical activities have been designed to encourage reflection, provoke discussions, build skills and ensure the local relevance of information. There is a review at the end of each session to ensure the SAs have understood the key points before they progress to subsequent sessions. This book brings to life the experiences of children affected by maternal imprisonment, and provides unique, in-depth analysis of judicial thinking on this issue. It explores the experiences of children whose mothers are sentenced to imprisonment in England and Wales and contrasts their state-sanctioned separation from their mothers in the criminal courts (where the court may not even be aware of the existence of a child) to the state-sanctioned separation of children from their parents in the family courts, where the child has legal representation and their best interests are the court's paramount consideration. Drawing on detailed empirical research with children, caregivers, and Crown Court judiciary, *Maternal Sentencing and the Rights of the Child* brings together relevant literature on law, criminology, and human rights to provide insight into the reasons for the differentiated treatment and its implications for children, their caregivers, and wider society. This money saving package includes the McKinney: Maternal-Child Nursing, 3rd edition textbook, and the Simulation Learning System (SLS) User Guide & Access Code for McKinney's Maternal-Child Nursing, 3rd edition. STUDENT ACCESS ONLY - INSTITUTIONAL LICENSE REQUIRED. Simulation with the SLS is a complete learning experience that bridges the gap between lecture and clinicals to prepare you for the real world of nursing. Maternal and Child Health (MCH) continues to be one of the most important fields of study for improving the health of populations across the globe. Two the 10 Millennium Development Goals strive specifically to improve maternal and child health, and several others, such as gender equality and HIV/AIDS, are critical aspects of Maternal and Child Health. Written for students in public health, medical, and allied health professions, *Global Case Studies in Maternal and Child Health* brings to life theoretical and conceptual ideas discussed in primary texts, through the analysis of lived stories of maternal and child health programs around the world. Using structured case studies of community-based programs in maternal and child health from around the world, students will be presented with real-life ethical, practical and theoretical challenges that will develop critical and analytical thinking skills and also provide them with practice models that they can use in their future or present work. Preceded by *Maternal-child nursing / Emily Slone McKinney ... [et al.]*. 4th ed. c2013. The delivery of high quality and equitable care for both mothers and newborns is complex and requires efforts across many sectors. The United States spends more on childbirth than any other country in the world, yet outcomes are worse than other high-resource countries, and even worse for Black and Native American women. There are a variety of factors that influence childbirth, including social determinants such as income, educational levels, access to care, financing, transportation, structural racism and geographic variability in birth settings. It is important to reevaluate the United States' approach to maternal and newborn care through the lens of these factors across multiple disciplines. *Birth Settings in America: Outcomes, Quality, Access, and Choice* reviews and evaluates maternal and newborn care in the United States, the epidemiology of social and clinical risks in pregnancy and childbirth, birth settings research, and access to and choice of birth settings. *Maternal and Infant Assessment for Breastfeeding and Human Lactation: A Guide for the Practitioner*, Second Edition explores the characteristics of breastfeeding problems that can be seen, heard, or observed, and allows the assessor to distinguish between breastfeeding problems and actual medical issues. This text is designed for healthcare professionals who are responsible for constructing a comprehensive process for determining the breastfeeding status of mothers and infants. While past experience can provide some direction for exploration, a thorough assessment demands detailed examination of This open access edited book brings together new research on the mechanisms by which maternal and reproductive health policies are formed and implemented in diverse locales around the world, from global policy spaces to sites of practice. The authors – both internationally respected anthropologists and new voices – demonstrate the value of ethnography and the utility of reproduction as a lens through which to generate rich insights into professionals' and lay people's intimate encounters with policy. Authors look closely at core policy debates in the history of global maternal health across six different continents, including: Women's use of misoprostol for abortion in Burkina Faso The place of traditional birth attendants in global maternal health Donor-driven maternal health programs in Tanzania Efforts to integrate qualitative evidence in WHO maternal and child health policy-making Anthropologies of Global Maternal and Reproductive Health will engage readers interested in critical conversations about global health policy today. The broad range of foci makes it a valuable resource for teaching in medical anthropology, anthropology of reproduction, and interdisciplinary global health programs. The book will also find readership amongst critical public health scholars, health policy and systems researchers, and global public health practitioners. How to prevent and manage low birth weight Growth and nutrition during the fetal period and the first 24 months after birth are important determinants of development in early childhood. Optimal nutrition and health care of both the mother and infant during these first 1000 days of an infant's life are closely linked to growth, learning potential and neurodevelopment, in turn affecting long-term outcomes. Children with low birth weight do not only include premature babies, but also those with intrauterine growth restrictions who consequently have a very high risk of developing metabolic syndrome in the future. Epidemiology, epigenetic programming, the correct nutrition strategy and monitoring of outcomes are thus looked at carefully in this book. More specifically, two important nutritional issues are dealt with in depth: The first being the prevention of low birth weight, starting with the health of adolescent girls, through the pre-pregnancy and pregnancy stages and ending with lactation. The second point of focus concerns the nutritional follow-up and feeding opportunities in relation to dietary requirements of children with low birth weight. It offers the perfect balance of maternal and child nursing care with the right depth and breadth of coverage for students in today's maternity/pediatric courses. A unique emphasis on optimizing outcomes, evidence-based practice, and research supports the goal of caring for women, families and children, not only in traditional hospital settings, but also wherever they live, work, study, or play. Clear, concise, and easy to follow, the content is organized around four major themes, holistic care, critical thinking, validating practice, and tools for care that help students to learn and apply the material. Specially designed to parallel the material in *Maternal-*

A respected authority updated for today's changing healthcare environment, Maternal & Child Health Nursing, 9th Edition, equips students for success by presenting maternal-newborn and child healthcare not as two separate disciplines, but as a continuum of knowledge. This extensively revised 9th Edition integrates a nursing process framework, an approachable organization, the latest evidence-based research, and engaging learning aids to ensure a mastery of essential concepts and cultivate the skills for successful nursing practice. As women's labor force participation has risen around the globe, scholarly and policy discourse on the ramifications of this employment growth has intensified. This book explores the links between maternal employment and child health using an international perspective that is grounded in economic theory and rigorous empirical methods. Women's labor-market activity affects child health largely because their paid work raises household income, which strengthens families' abilities to finance healthcare needs and nutritious food; however, time away from children could counteract some of the benefits of higher socioeconomic status that spring from maternal employment. New evidence based on data from nine South and Southeast Asian countries illuminates the potential tradeoff between the benefits and challenges families contend with in the face of women's labor-market activity. This book provides new, original evidence on links between maternal employment and children's health using data associated with three indicators of children's nutritional status: birth size, stunting, and wasting. Results support the implementation and enforcement of policy interventions that bolster women's advancement in the labor market and reduce undernutrition among children. Scholars, students, policymakers and all those with an interest in nutritional science, gender, economics of the family, or development economies will find the methodology and original results expounded here both useful and informative. A unique and innovative resource for conducting ethnographic research in health care settings, Ethnographic Research in Maternal and Child Health provides a combination of ethnographic theory and an international selection of empirical case studies. The book begins with an overview of the origins and development of ethnography as a methodology, discussing underpinning theoretical perspectives, key methods and challenges related to conducting this type of research. The following substantive chapters present and reflect on ethnographic studies conducted in the fields of maternal and child health, neonatal nursing, midwifery and reproductive health. Designed for academics, postgraduate students and health practitioners within maternal and child health, family health, medical sociology, medical anthropology, medicine, midwifery, neonatal care, paediatrics, social anthropology and public health, the book will also illuminate issues that can help health practitioners to improve service delivery. Our current era of globalization, war, and socioeconomic unrest has revealed public health

as a worldwide concern and a major frontier for social justice with maternal and child health at its epicenter. Yet, there has been a relative scarcity of training resources specifically dedicated to this crucial area. "Maternal and Child Health: Global Challenges, Programs, and Policies" addresses this gap in current knowledge by analyzing the range of socioeconomic and environmental factors, health care disparities, politics, policies, and cultural practices that impact the health and safety of mothers, as well as the well-being and optimum development of their children. Individual sections focus on unequal distribution of the world's resources, politics and power, specific disease concerns, programs, policies and emerging concerns with a focus on what is currently being done, and what needs to be done to improve the health status of women, children, and adolescents. The book's contributors are some of the world's most respected experts, carefully selected to represent different global geographic regions and diverse professional disciplines related to maternal and child health from both academic and field practice perspectives. Among the topics in this authoritative volume: The impact of war, globalization, gender inequity, and harmful traditional practices (e.g., female genital mutilation). Specific health concerns, including tuberculosis, malaria, HIV, and malnutrition. Child and adolescent health issues, from abuse and neglect to children in difficult circumstances. Pregnancy-related issues: safety, abortion and post-abortion care, teen pregnancy, and more. Strategies for planning, developing, and maintaining maternal and child health systems in developing countries. The status of global initiatives, such as Integrated Management of Childhood Illnesses and the Millennium Development Goals. The status of evidence-based maternal and child health in the developing world. With such a wealth of information on both practical and conceptual levels, "Maternal and Child Health: Global Challenges, Programs, and Policies" is as relevant to students and researchers in the field as it is to policy makers and those working for global health and development organizations. It also makes an excellent stand-alone text for courses in global health in general and global maternal and child health in particular. The perfect balance of maternal and child nursing care in a new textbook conceived and written to be a combination textbook! An extensive review by nursing educators ensures that it offers just the right depth and breadth of coverage for students in today's maternity/pediatric courses. Growing research shows that many children from immigrant and refugee families are not doing well in school, due in part to linguistic and cultural disadvantages. Teaching dual-language learners requires cultural sensitivity, an understanding of language acquisition, and intentional teaching strategies. Combining research and techniques, this resource helps early childhood educators support dual-language learners as they develop the skills necessary for school readiness and success. Offering the keen insight and expertise of a new author team and new contributors, the Fourth Edition of Kotch's Maternal and Child Health: Problems, Programs, and Policy in Public Health continues to offer a comprehensive, trusted introduction to the field of maternal and child health (MCH), while addressing the traditional MCH topics in a modern context that includes race/ethnicity, an expanded family focus, and a broadened approach that will appeal to health professionals both in and outside of public health practice. Organized according to fundamental principles of MCH, the book covers traditional MCH topics such as family planning and maternal and infant health as well as skills that are applicable across Public Health disciplines such as planning, research, monitoring, and advocacy. The evaluation of reproductive, maternal, newborn, and child health (RMNCH) by the Disease Control Priorities, Third Edition (DCP3) focuses on maternal conditions, childhood illness, and malnutrition. Specifically, the chapters address acute illness and undernutrition in children, principally under age 5. It also covers maternal mortality, morbidity, stillbirth, and influences to pregnancy and pre-pregnancy. Volume 3 focuses on developments since the publication of DCP2 and will also include the transition to older childhood, in particular, the overlap and commonality with the child development volume. The DCP3 evaluation of these conditions produced three key findings: 1. There is significant difficulty in measuring the burden of key conditions such as unintended pregnancy, unsafe abortion, nonsexually transmitted infections, infertility, and violence against women. 2. Investments in the

continuum of care can have significant returns for improved and equitable access, health, poverty, and health systems. 3. There is a large difference in how RMNCH conditions affect different income groups; investments in RMNCH can lessen the disparity in terms of both health and financial risk. Designed to accompany Perry's Maternal Child Nursing Care, 4th Edition, this workbook will assist students in understanding and applying material from each chapter in the text. This book presents both theoretical contributions and empirical applications of advanced statistical techniques including geo-additive models that link individual measures with area variables to account for spatial correlation; multilevel models that address the issue of clustering within family and household; multi-process models that account for interdependencies over life-course events and non-random utilization of health services; and flexible parametric alternatives to existing intensity models. These analytical techniques are illustrated mainly through modeling maternal and child health in the African context, using data from demographic and health surveys. In the past, the estimation of levels, trends and differentials in demographic and health outcomes in developing countries was heavily reliant on indirect methods that were devised to suit limited or deficient data. In recent decades, world-wide surveys like the World Fertility Survey and its successor, the Demographic and Health Survey have played an important role in filling the gap in survey data from developing countries. Such modern demographic and health surveys enable investigators to make in-depth analyses that guide policy intervention strategies, and such analyses require the modern and advanced statistical techniques covered in this book. The text is ideally suited for academics, professionals, and decision makers in the social and health sciences, as well as others with an interest in statistical modelling, demographic and health surveys. Scientists and students in applied statistics, epidemiology, medicine, social and behavioural sciences will find it of value.
