Exam paper or any further ISC notifications/circulars This systematic study of
Chrysostom's Homilies on Genesis demonstrates the wide-ranging sources and
techniques that undergird his exegesis, shedding new light on networks of Biblical
learning in Late Antiquity. It shows the relationship between exegetical traditions
and ethical evaluation in specific homiletic discourses, highlighting the
importance of name and word meanings for Chrysostom. Engineers must possess a range
of business communication skills that enable them to effectively communicate the
purpose and relevance of their idea, process, or technical design. This unique
business communication text is packed with practical advice that will improve your

ability to– Market ideas Write proposals Generate enthusiasm for research Deliver presentations Explain a design Organize a project team Coordinate meetings Create technical reports and specifications Focusing on the three critical communication needs of engineering professionals—speaking, writing, and listening—the book delineates critical communication strategies required in many group settings and work situations. It demonstrates how to integrate a marketing strategy into every facet of engineering communication, from presentations, visual aids, proposals, and technical reports to e-mail and phone calls. Using situational examples, the book also illustrates how to use computers, graphics, and other engineering tools to effectively communicate with other engineers and managers. The book covers all the aspects of Data Interpretation & Data Sufficiency. The book is divided into 7 chapters. Each chapter describes the concepts related to the chapter along with numerous Solved Examples. The theory portion is followed by 5 levels of exercises in each chapter: 1. Concept Applicator 2. Concept Builder 3. Concept Cracker 4. Concept Deviator 5. Concept Eliminator The past questions of major exams like CAT/ XAT/ IIFT/ SNAP are covered in the book. The extensive use of the web by patients and laymen for health information, challenges us to build information services that are easily accessible and trustworthy. The evolution towards a semantic web is addressed and papers covering all the fields of biomedical informatics are also included. [Ed.]. The third edition of A Primer on Partial Least Squares Structural Equation Modeling (PLS-SEM) guides readers through learning and mastering the techniques of this approach in clear language. Authors Joseph H. Hair, Jr., G. Tomas M. Hult, Christian Ringle, and Marko Sarstedt use their years of conducting and teaching research to communicate the fundamentals of PLS-SEM in straightforward language to explain the details of this method, with limited emphasis on equations and symbols. A running case study on corporate reputation follows the different steps in this technique so readers can better understand the research applications. Learning objectives, review and critical thinking questions, and key terms help readers cement their knowledge. This edition has been thoroughly updated, featuring the latest version of the popular software package SmartPLS 3. New topics have been added throughout the text, including a thoroughly revised and extended chapter on mediation, recent research on the foundations of PLS-SEM, detailed descriptions of research summarizing the advantages as well as limitations of PLS-SEM, and extended coverage of advanced concepts and methods, such as out-of-sample versus in-sample prediction metrics, higher-order constructs, multigroup analysis, necessary condition analysis, and endogeneity. Covering both core and peripheral phenomena, The Syntactic Structures of Korean is a concrete and precise grammar of the language. Based on the framework of Sign-based Construction Grammar, it provides a grammar of Korean which is computationally implementable and cognitively viable. Remarkably broad, yet in-depth, it is an outstanding analysis of Korean syntax and semantics which will be welcomed by those working in linguistics and the Korean language.

Communication is vital for social participation. However, communication often takes place under suboptimal conditions. This makes communication harder and less reliable, leading at worst to social isolation. In order to promote participation, it is necessary to understand the mechanisms underlying communication in different situations. Human communication is often speech based, either oral or written, but may also involve gesture, either accompanying speech or in the form of sign language. For communication to be achieved, a signal generated by one person has to be perceived by another person, attended to, comprehended and responded to. This process may be hindered by adverse conditions including factors that may be internal to the sender (e.g. incomplete or idiosyncratic language production), occur during transmission (e.g. background noise or signal processing) or be internal to the receiver (e.g. poor grasp of the language or sensory impairment). The extent to which these factors interact to generate adverse conditions may differ across the lifespan. Recent work has shown that successful speech communication under adverse conditions is associated with good cognitive capacity including efficient working memory and executive abilities such as updating and inhibition. Further, frontoparietal networks associated with working memory and executive function have been shown to be activated to a greater degree when it is harder to achieve speech comprehension. To date, less work has focused on sign language communication under adverse conditions or the role of gestures accompanying speech communication under adverse conditions. It has been proposed that the role of working memory in communication under such conditions is to keep fragments of an incomplete signal in mind, updating them as appropriate and inhibiting irrelevant information, until an adequate match can be achieved with lexical and semantic representations held in long term memory. Recent models of working memory highlight an episodic buffer whose role is the multimodal integration of information from the senses and long term memory. It is likely that the episodic buffer plays a key role in communication under adverse conditions. The aim of this research topic is to draw together multiple perspectives on communication under adverse conditions including empirical and theoretical approaches. This will facilitate a scientific exchange among individual scientists and groups studying different aspects of communication under adverse conditions and/or the role of cognition in communication. As such, this topic belongs firmly within the field of Cognitive Hearing Science. Exchange of ideas among scientists with different perspectives on these issues will allow researchers to identify and highlight the way in which different internal and external factors interact to make communication in different modalities more or less successful across the lifespan. Such exchange is the forerunner of broader dissemination of results which ultimately, may make it possible to take measures to reduce adverse conditions, thus facilitating communication. Such measures might be implemented in relation to the built environment, the design of hearing aids and public awareness. In the wake of the disaster many have asked, and keep asking, how a sustainable and socially fair economy can be build. Ethics is one of the cornerstones of human

interaction in general and in economic interaction. This study has been inspired by the question: How can unethical behaviour be avoided? This book deals with the question of how ethics in general can be improved. In today's business world Business Ethical Codes of Conduct (BECC), or more commonly called honour codes, have reached some prominence. Utilizing questionnaires and moral dilemmas this study attempts to answer the question: How efficient are codes of conduct? The study arrives at surprising insights into the impact of priming-effects on morale and shows that the mere exposure to ethical questions influences how we behave.

This book presents an innovative and novel approach to linguistic semantics, beginning with the idea that language can be described as a system for the expression of linguistic Meanings as particular surface forms or Texts. Semantics is specifically that system of rules that ensures a correct transition from a Semantic Representation of the Meaning of a family of synonymous sentences to the Deep Syntactic Representation of a particular sentence. Framed in the terms of Meaning-Text linguistics, this volume discusses in detail the problems of Semantic Representation [including the semantic structure of utterances, the semantics of Causation in English, and communicative, or information, structure. Based on the author's life-long dedication to the study of the semantics and syntax of natural language, this book is a paradigm-shifting contribution to the language sciences whose originality and daring will make it essential reading for linguists, anthropologists, semioticians, and computational linguists.
